

Automation and Traceability in Anatomical Pathology

Automation is transforming Healthcare

Global Leader in Total Laboratory Automation

CONFIDENTIAL

Leading Lab Automation Solutions

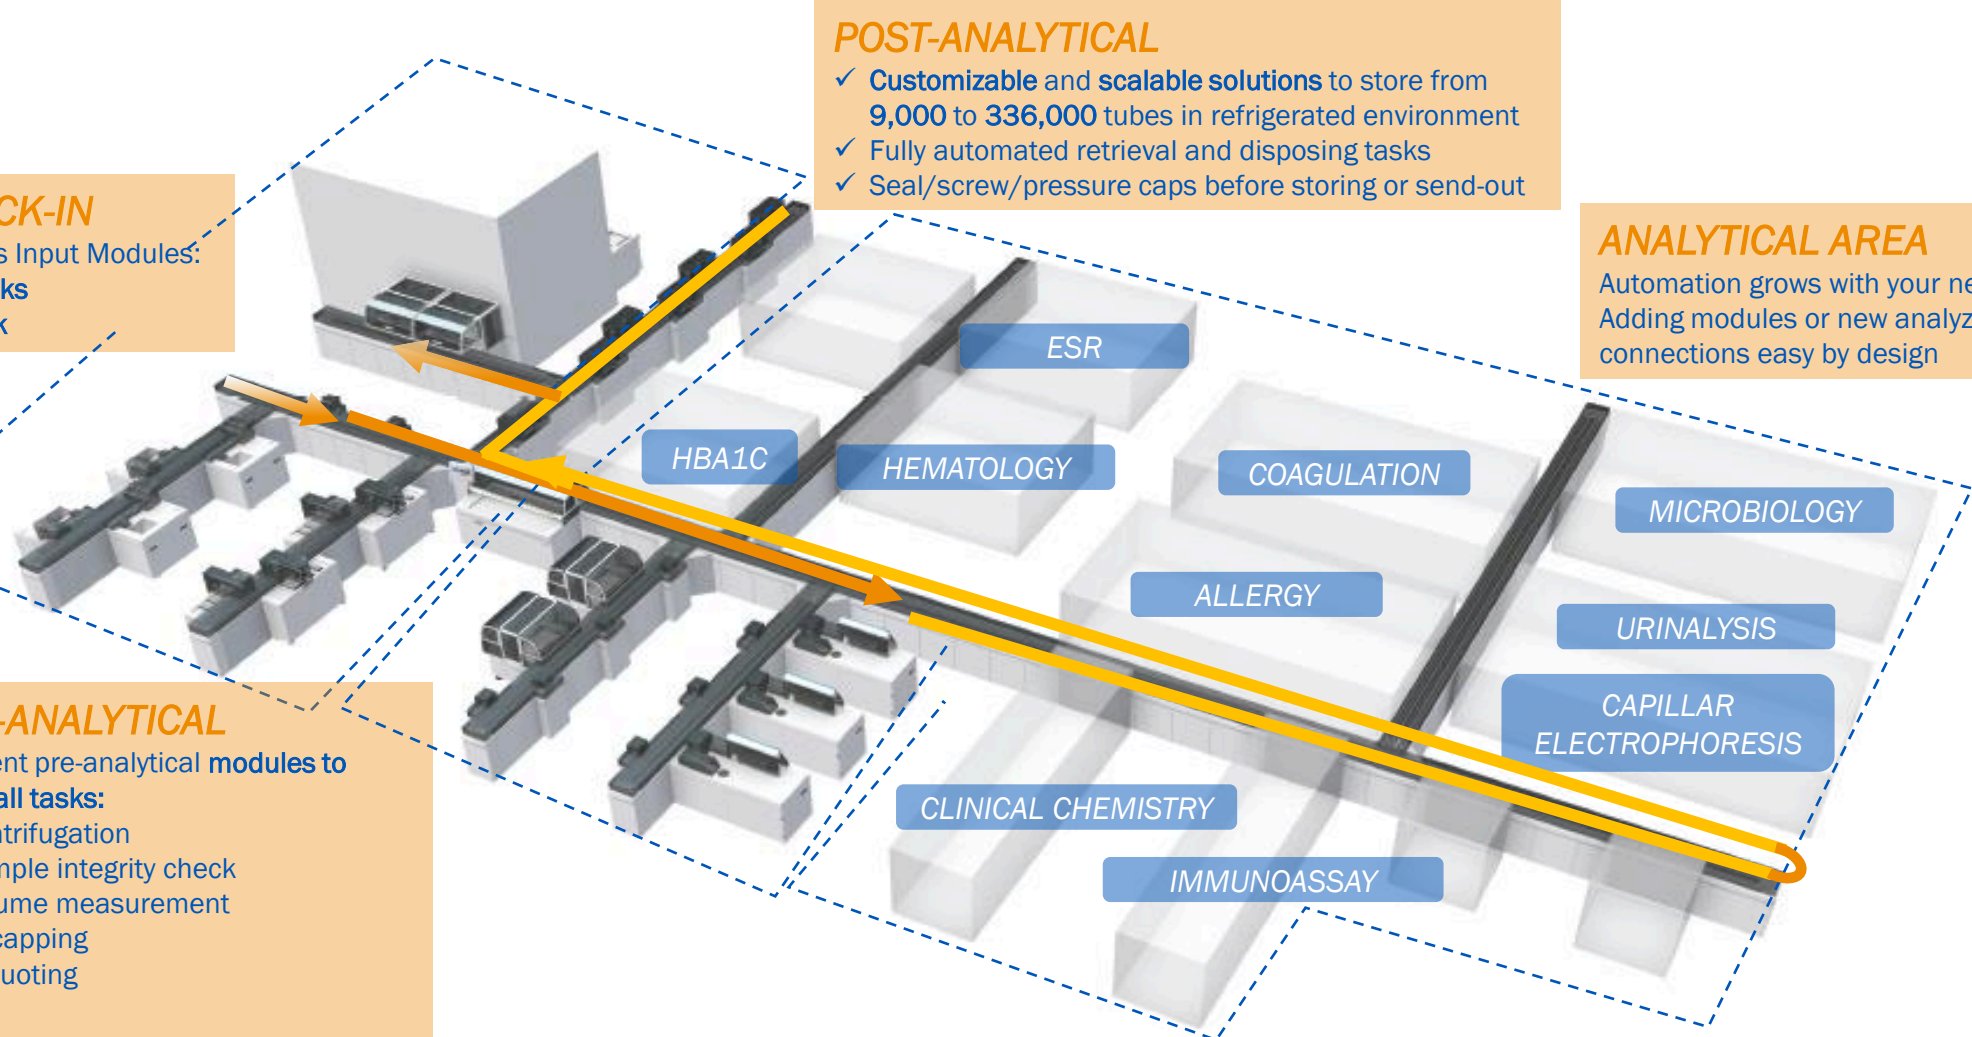

FlexLab

CHECK-IN
 Various Input Modules:
 ✓ Racks
 ✓ Bulk

POST-ANALYTICAL
 ✓ Customizable and scalable solutions to store from 9,000 to 336,000 tubes in refrigerated environment
 ✓ Fully automated retrieval and disposing tasks
 ✓ Seal/screw/pressure caps before storing or send-out

ANALYTICAL AREA
 Automation grows with your needs
 Adding modules or new analyzer connections easy by design

PRE-ANALYTICAL
 Different pre-analytical modules to cover all tasks:
 ✓ Centrifugation
 ✓ Sample integrity check
 ✓ Volume measurement
 ✓ Decapping
 ✓ Aliquoting

Labs before and after Inpeco

MANUAL PROCESS

- Untidy settings
- Risk of contamination
- Uncertain results delivery
- No sample traceability

AUTOMATED PROCESS

- Total sample control
- Efficient and tidy workflow
- Predictable turnaround time
- Certified results

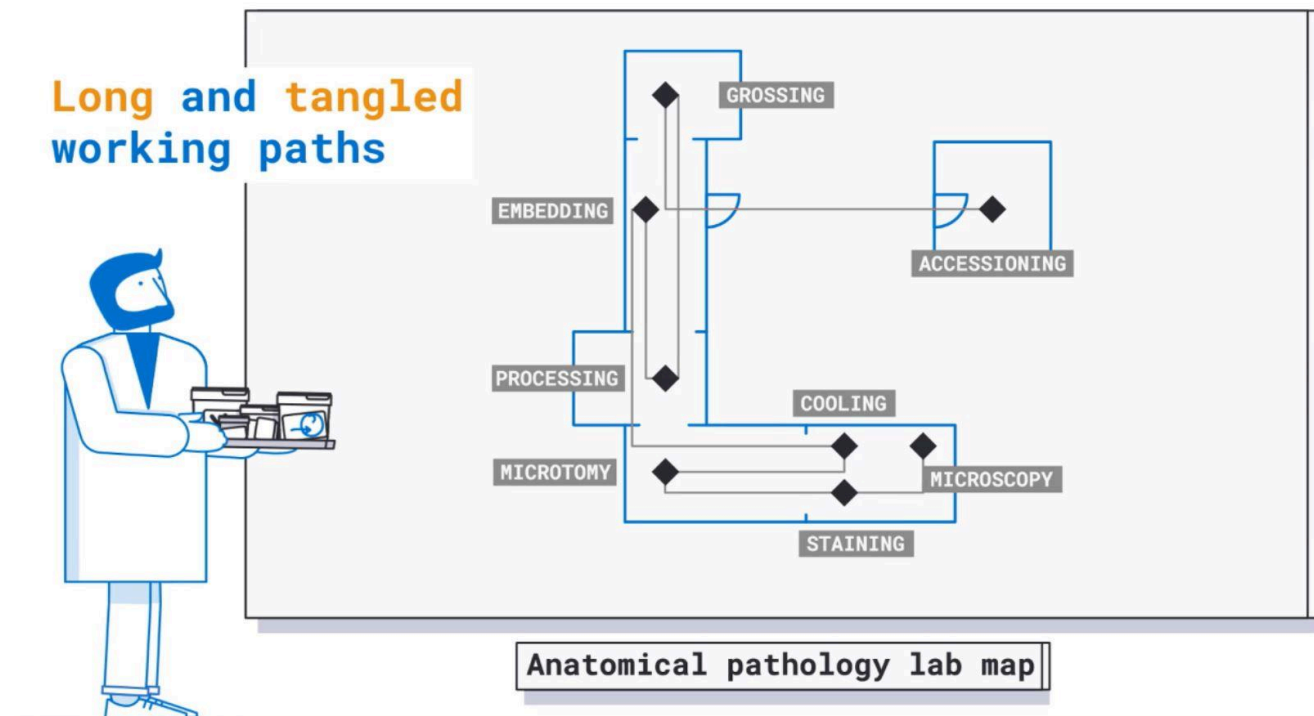

Inpeco in Anatomical Pathology

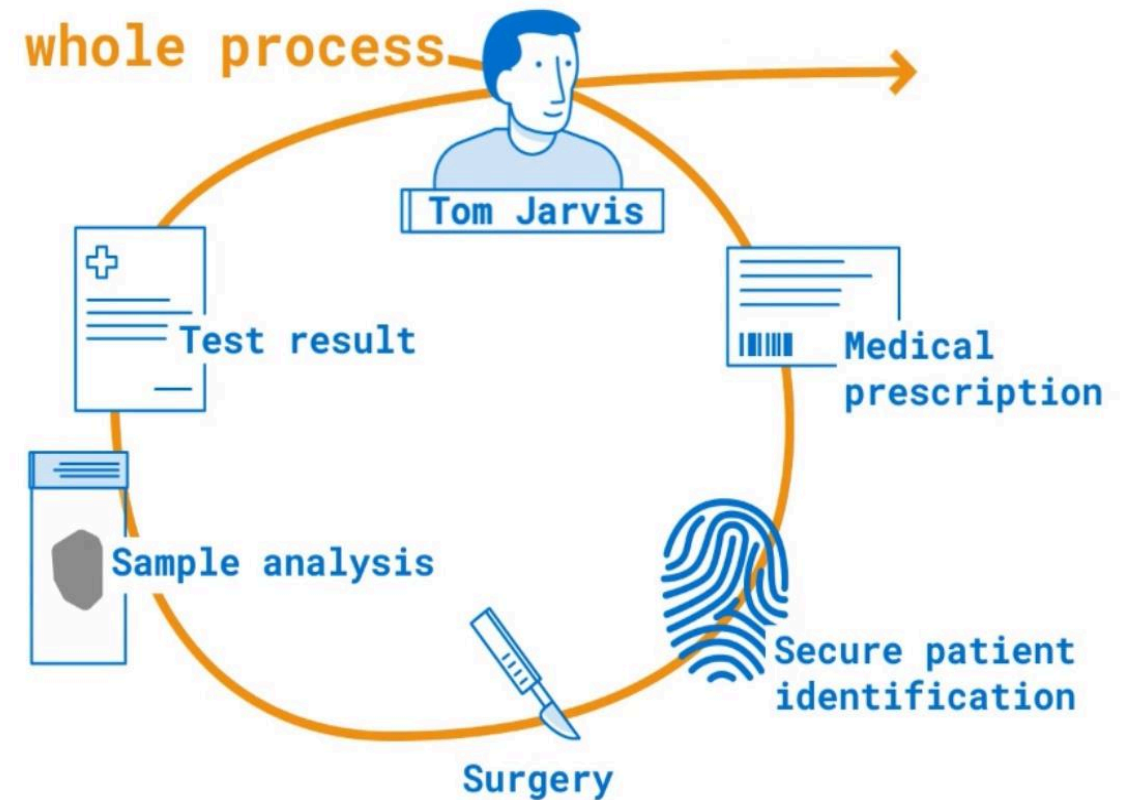

The Diagnostic Pathway in Anatomical Pathology

The current diagnostic pathway of a histological specimen is subject to **several processes**, often **manual**, performed in the various stages of processing in the pathology laboratory. This **long** and **tangled working path** is not supported by a complete automation of the process, nor by a traceability of the sample from the point of collection.

Inpeco in Anatomical Pathology – The Goal

As for the clinical laboratory, Inpeco proposes to offer for the Anatomical Pathology a **Total Automation of the Diagnostic Process** of the histological sample, including **Full Traceability**, starting from the medical prescription and including the final archive.

Automation and Traceability in AP?

Four design principles that will change the game.

1

Data Collection & Guided Traceability

100% Standardization & Real Time monitoring (from Unstructured to structured data)

2

Automation of non-technical tasks

100% efficiency through re-distribution of lab work force

3 Uncompromised Instruments integration

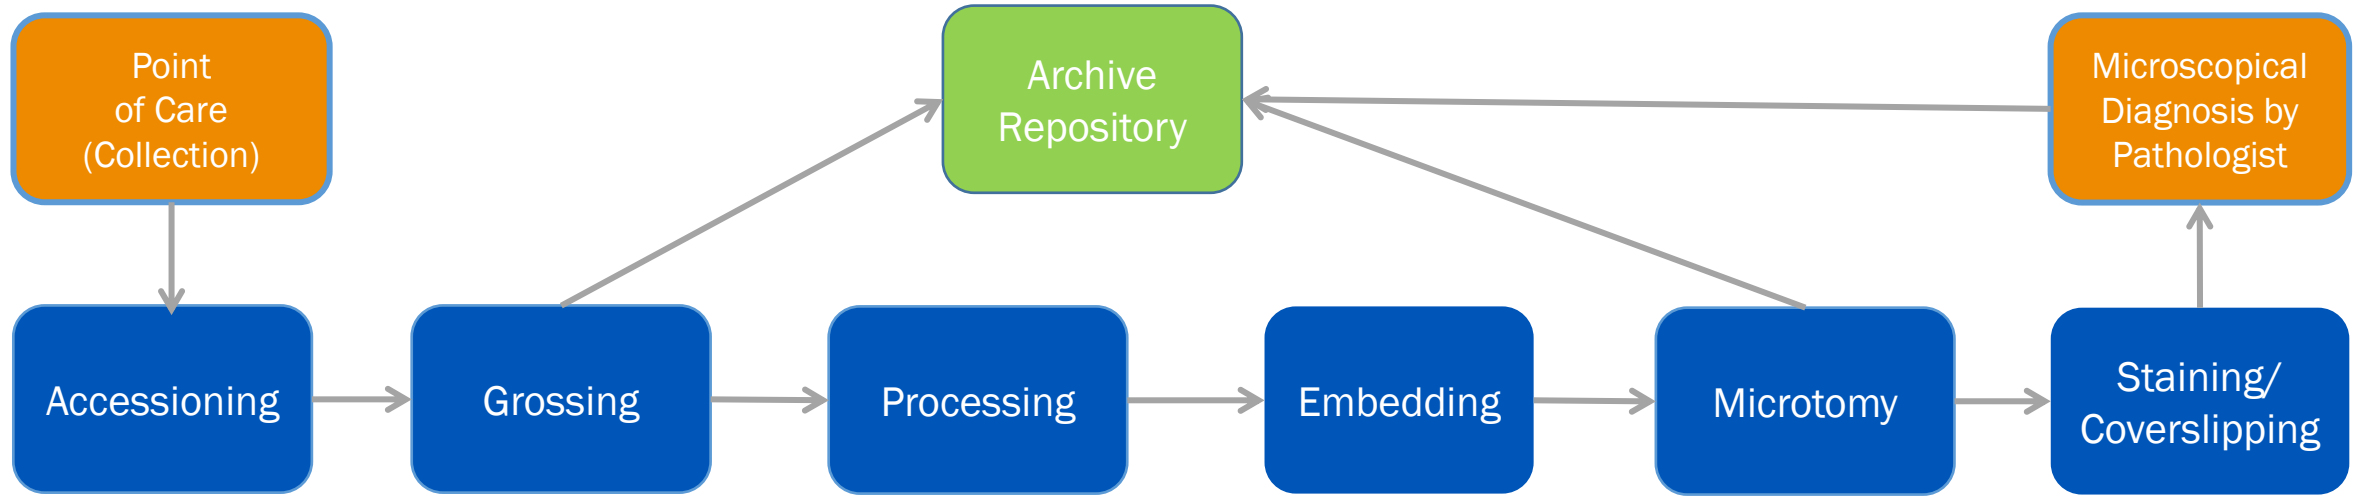

100% Open connectivity allows customer centric innovation

4 Automation of specimen handling

100% lean-management implementation and optimized workflow

Automation and Traceability System in AP Lab

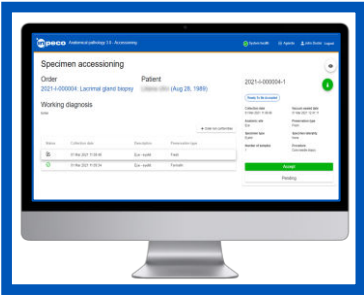

Building on the legacy of Inpeco's FlexLAB

FlexPath™

«FlexPath™, Inpeco's automation and traceability solutions for anatomical pathology labs.»

FlexPath™ – Products release 2022-23

- **FlexPath™ trace**
Traceability Guided System

- **FlexPath™ move**
Sample Transportation System

- **FlexPath™ blox**
Automatic-Assisted Embedding module

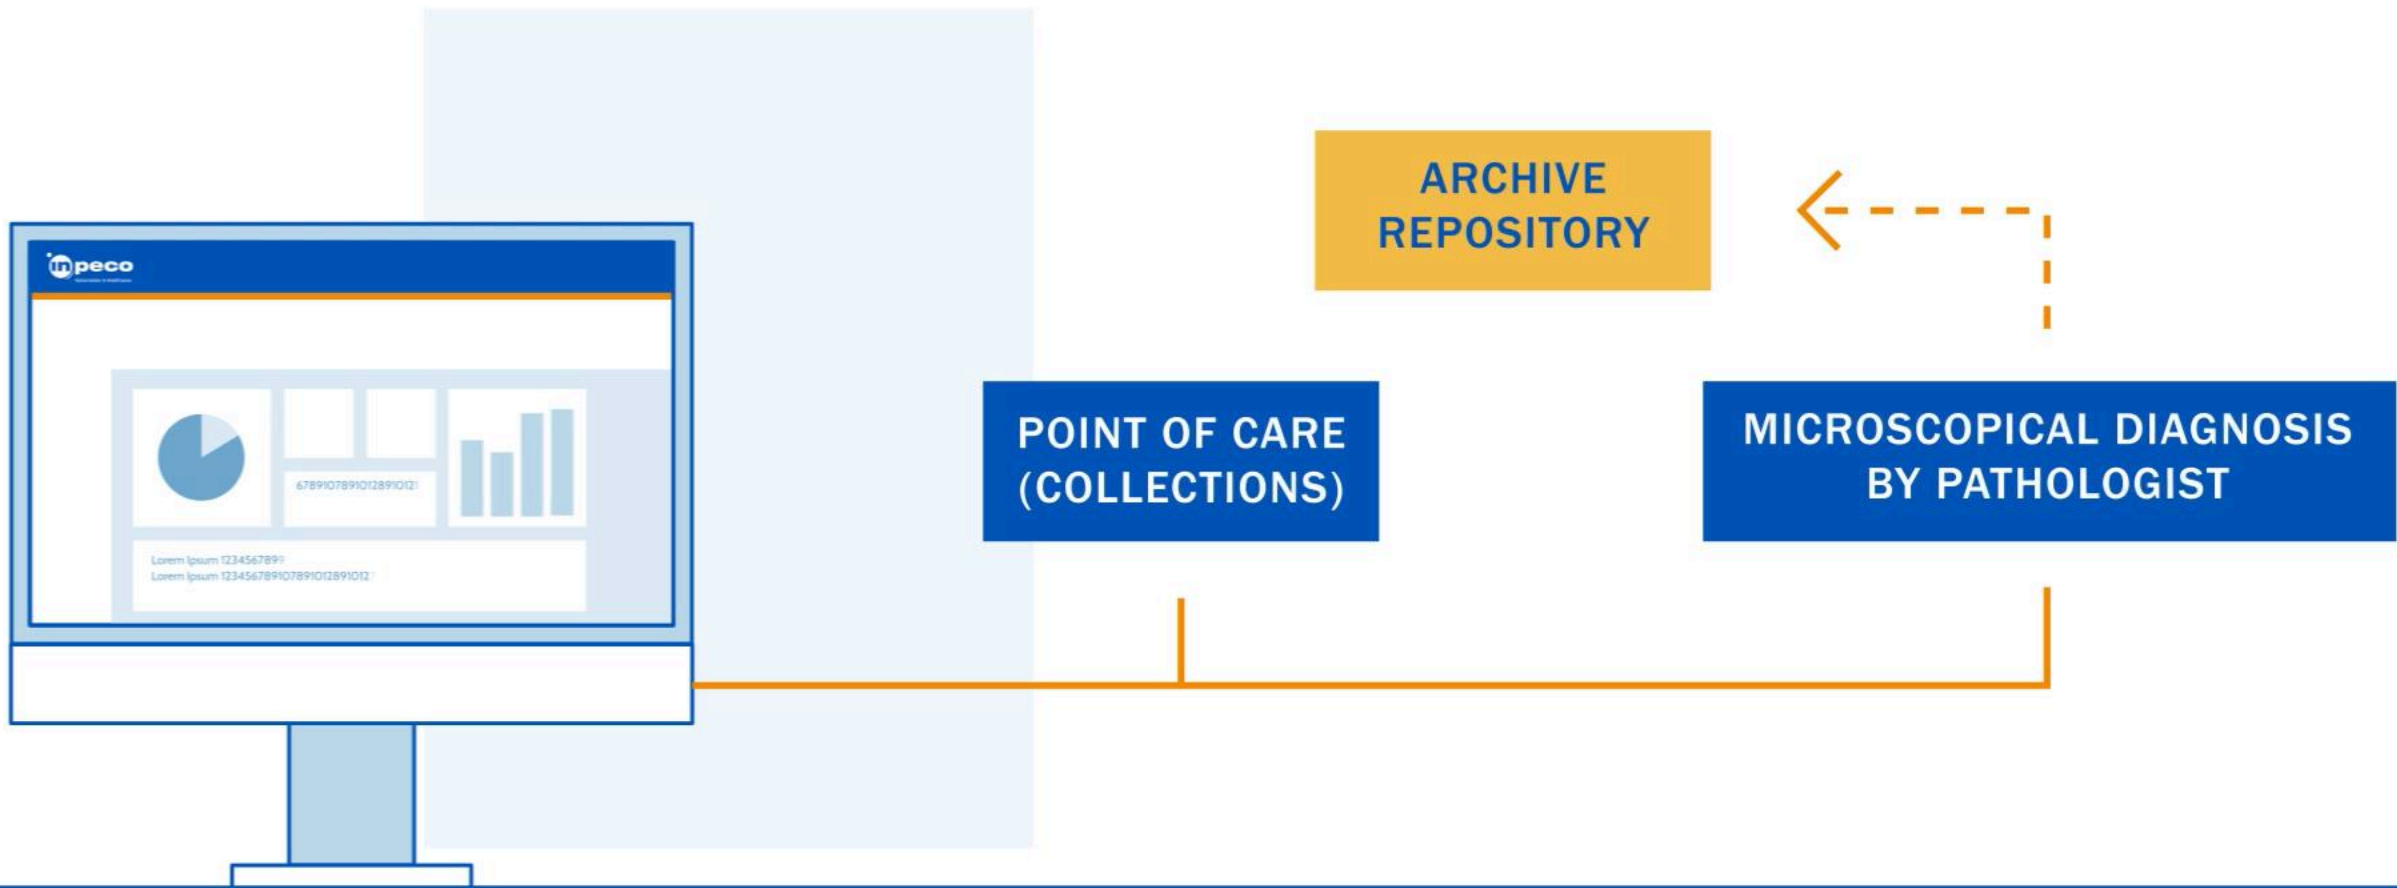

- **FlexPath™ store**
Automatic Paraffin blocks Storage

FlexPath™ *trace* -Traceability Guided System

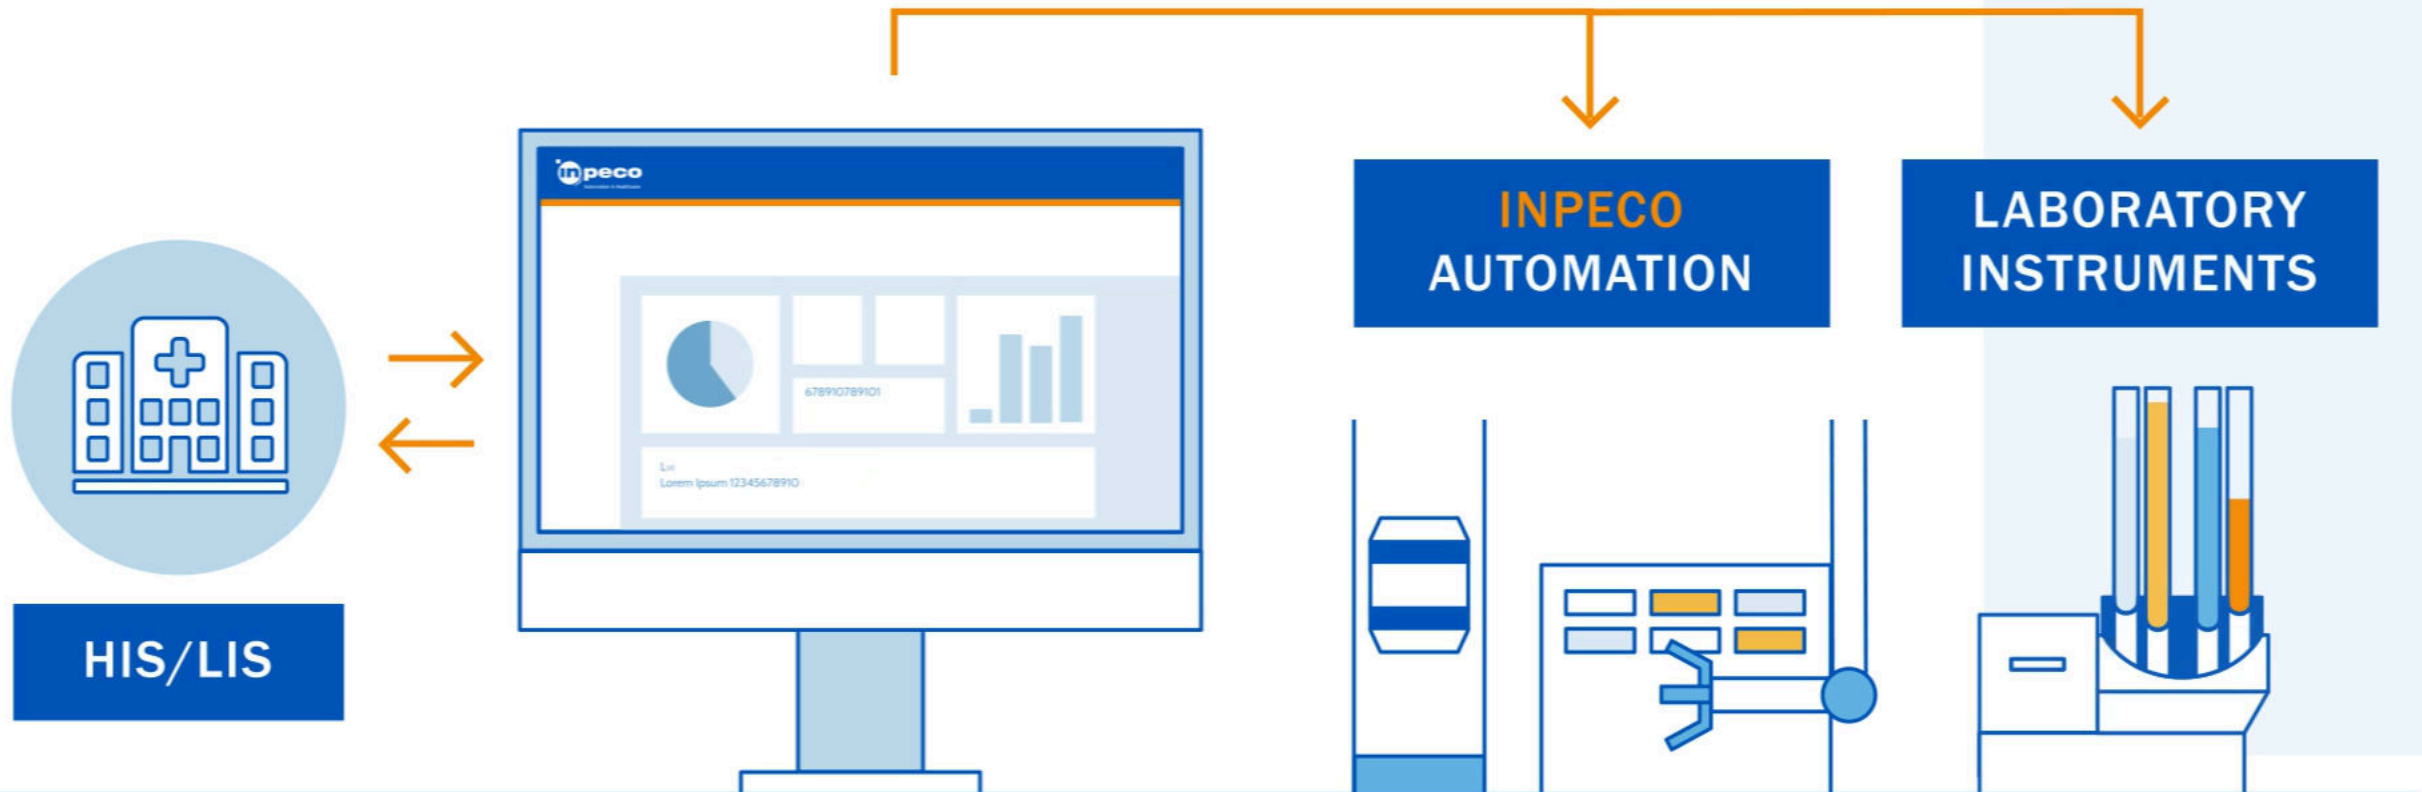

Traceability Guided System

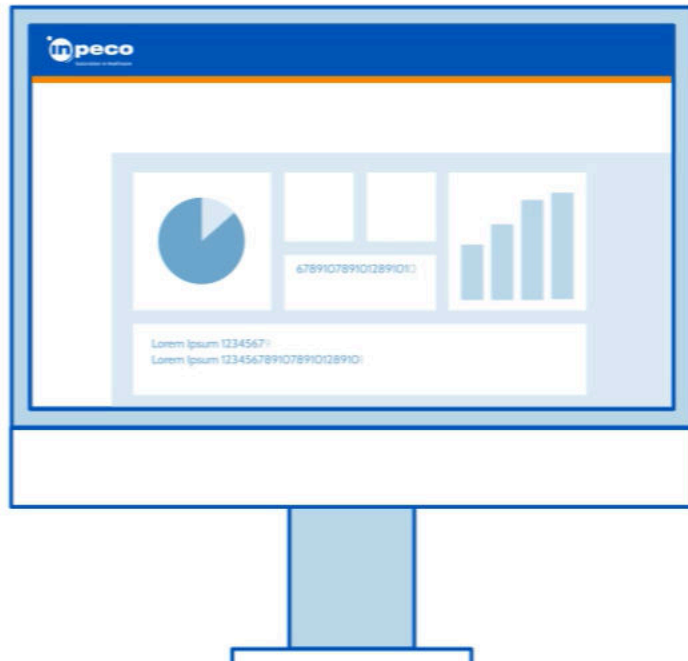

Traceability Guided System

A data bridge between collection points and the Laboratory.

Traceability Guided System

- ✓ **Verifies** correct patient sample association
- ✓ **Tracks** the sample throughout the entire workflow
- ✓ **Collects** valuable data
- ✓ **Guides** the operator through the process
